ArrowSpan Offers Carriers and Service Providers an Affordable and Dependable Way to Use a Wi-Fi Mesh Network

Santa Clara, Calif., January 8, 2007 – ArrowSpan Inc., a global provider of Wi-Fi mesh solutions, is introducing its latest Wi-Fi mesh product. The MeshAP 1100 Indoor uses 25mW of RF power, and is able to provide a large scale Wi-Fi mesh deployment for the RF sensitive environment. ArrowSpan's cutting-edge Wi-Fi mesh technology is able to provide a dependable and secure Wi-Fi deployment for hotels, malls, airports and even enterprises. ArrowSpan's MeshAP network is flexible enough where carriers and service providers can provide coverage in an affordable and efficient way to cash-strapped and underdeveloped areas and does not require a wired backhaul for each access point.

"A wireless network's flexible attributes can help make businesses, hotels and hospitals more efficient because it eliminates the need for workers to travel back and forth to gain access to key information, therefore making the MeshAP 1100 the best alternative to a wired network," said Max Lu, President/CEO of ArrowSpan.

ArrowSpan's mesh routers form a self-configuring and self-healing wireless broadband data network, and can expand hotspots to hot zones. The dual radio design provides better wireless coverage and is compatible with third party Access Servers, IP devices and Network routers. The MeshAP 1100 is now available online at <http://www.arrowspan.com>

About ArrowSpan, Inc

ArrowSpan Inc. develops and manufactures next-generation WiFi wireless mesh network solutions. They are specifically designed to be seamlessly compatible with all brands of an existing network access server, application server, router and gateway. Our solutions enable carriers and service providers, to expand existing wireless networks to a wider reach. ArrowSpan's streamlined design philosophy and manufacturing expertise, makes the WiFi mesh network solutions one of most cost efficient solutions on the market. Our commitment at ArrowSpan is to develop a product that is the best-in-class, but also profitable and economical for the carriers and service providers.
